Zoe K. & Central America: A CAMPAIGN Paper on PFAS

For the second year in a row, the Ose of Communications has partnered with the Whitman Environmental Coalition to produce our annual PFAS report. This report is designed to inform the Whitman community about the prevalent use of PFAS chemicals and the need to halt the production of such substances. PFAS chemicals are commonly found in consumer products, like non-stick cookware and stain-resistant fabrics. These chemicals have been linked to various health issues, including cancer, birth defects, and hormone disruption.
