Stand Up Paddleboard Inflation Instructions

Each SUP rolls up to fit into an easily transportable backpack. Also included in the backpack are fins, the pump, and a repair kit.

To inflate the board, first unroll it. Next, press and twist the valve spring into the “up” position. This will let air IN, but not OUT.

The SUP will come with a hand pump to inflate the board. Once it becomes difficult to pump, continue to pump for another few minutes until the board is very, very firm. Once in the water, it should not flex or bend at all.
