
Single Variable Calculus

Early Transcendentals

This work is licensed under the Creative Commons Attribution-NonCommercial-ShareAlike License. To view a copy of this license, visit <http://creativecommons.org/licenses/by-nc-sa/3.0/> or send a letter to Creative Commons, 543 Howard Street, 5th Floor, San Francisco, California, 94105, USA. If you distribute this work or a derivative, include the history of the document.

This text was initially written by David Guichard. The single variable material in chapters 1–9 is a modification and expansion of notes written by Neal Koblitz at the University of Washington, who generously gave permission to use, modify, and distribute his work. New material has been added, and old material has been modified, so some portions now bear little resemblance to the original.

The book includes some exercises and examples from *Elementary Calculus: An Approach Using Infinitesimals*, by H. Jerome Keisler, available at <http://www.math.wisc.edu/~keisler/calc.html> under a Creative Commons license. In addition, the chapter on differential equations (in the multivariable version) and the section on numerical integration are largely derived from the corresponding portions of Keisler's book. Albert Schueller, Barry Balof, and Mike Wills have contributed additional material.

This copy of the text was compiled from source at 10:09 on 2/20/2018.

I will be glad to receive corrections and suggestions for improvement at guichard@whitman.edu.

*For Kathleen,
without whose encouragement
this book would not have
been written.*

Contents

1

Analytic Geometry 13

- 1.1 Lines 14
- 1.2 Distance Between Two Points; Circles 19
- 1.3 Functions 20
- 1.4 Shifts and Dilations 25

2

Instantaneous Rate of Change: The Derivative 29

- 2.1 The slope of a function 29
- 2.2 An example 34
- 2.3 Limits 36
- 2.4 The Derivative Function 46
- 2.5 Adjectives For Functions 51

5

Contents 7

6

Applications of the Derivative 117

- 6.1 Optimization 117
- 6.2 Related Rates 129
- 6.3 Newton's Method 137
- 6.4 Linear Approximations 141
- 6.5 The Mean Value Theorem 143

7

Integration 147

- 7.1 Two examples 147
- 7.2 The Fundamental Theorem of Calculus 151
- 7.3 Some Properties of Integrals 158

8

Techniques of Integration 163

- 8.1 Substitution 164
- 8.2 Powers of sine and cosine 169
- 8.3 Trigonometric Substitutions 171
- 8.4 Integration by Parts 174
- 8.5 Rational Functions 178
- 8.6 Numerical Integration 182
- 8.7 Additional exercises 187

6 Contents

3

Rules for Finding Derivatives 55

- 3.1 The Power Rule 55
- 3.2 Linearity of the Derivative 58
- 3.3 The Product Rule 60
- 3.4 The Quotient Rule 62
- 3.5 The Chain Rule 65

4

Transcendental Functions 71

- 4.1 Trigonometric Functions 71
- 4.2 The Derivative of $\sin x$ 74
- 4.3 A hard limit 75
- 4.4 The Derivative of $\sin x$, continued 78
- 4.5 Derivatives of the Trigonometric Functions 79
- 4.6 Exponential and Logarithmic functions 80
- 4.7 Derivatives of the exponential and logarithmic functions 82
- 4.8 Implicit Differentiation 87
- 4.9 Inverse Trigonometric Functions 92
- 4.10 Limits revisited 95
- 4.11 Hyperbolic Functions 100

5

Curve Sketching 105

- 5.1 Maxima and Minima 105
- 5.2 The first derivative test 109
- 5.3 The second derivative test 110
- 5.4 Concavity and inflection points 111
- 5.5 Asymptotes and Other Things to Look For 113

8 Contents

9

Applications of Integration 189

- 9.1 Area between curves 189
- 9.2 Distance, Velocity, Acceleration 194
- 9.3 Volume 197
- 9.4 Average value of a function 204
- 9.5 Work 207
- 9.6 Center of Mass 211
- 9.7 Kinetic energy; improper integrals 217
- 9.8 Probability 221
- 9.9 Arc Length 230
- 9.10 Surface Area 232

10

Polar Coordinates, Parametric Equations 239

- 10.1 Polar Coordinates 239
- 10.2 Slopes in polar coordinates 243
- 10.3 Areas in polar coordinates 245
- 10.4 Parametric Equations 248
- 10.5 Calculus with Parametric Equations 251

Introduction

The emphasis in this course is on problems—doing calculations and story problems. To master problem solving one needs a tremendous amount of practice doing problems. The more problems you do the better you will be at doing them, as patterns will start to emerge in both the problems and in successful approaches to them. You will learn fastest and best if you devote some time to doing problems every day.

Typically the most difficult problems are story problems, since they require some effort before you can begin calculating. Here are some pointers for doing story problems:

1. Carefully read each problem twice before writing anything.
2. Assign letters to quantities that are described only in words; draw a diagram if appropriate.
3. Decide which letters are constants and which are variables. A letter stands for a constant if its value remains the same throughout the problem.
4. Using mathematical notation, write down what you know and then write down what you want to find.
5. Decide what category of problem it is (this might be obvious if the problem comes at the end of a particular chapter, but will not necessarily be so obvious if it comes on an exam covering several chapters).
6. Double check each step as you go along; don’t wait until the end to check your work.
7. Use common sense; if an answer is out of the range of practical possibilities, then check your work to see where you went wrong.

12 Introduction

Suggestions for Using This Text

1. Read the example problems carefully, filling in any steps that are left out (ask someone for help if you can’t follow the solution to a worked example).
2. Later use the worked examples to study by covering the solutions, and seeing if you can solve the problems on your own.
3. Most exercises have answers in Appendix A; the availability of an answer is marked by “ \Rightarrow ” at the end of the exercise. In the pdf version of the full text, clicking on the arrow will take you to the answer. The answers should be used only as a final check on your work, not as a crutch. Keep in mind that sometimes an answer could be expressed in various ways that are algebraically equivalent, so don’t assume that your answer is wrong just because it doesn’t have exactly the same form as the answer in the back.
4. A few figures in the pdf and print versions of the book are marked with “(AP)” at the end of the caption. Clicking on this should open a related interactive applet or Sage worksheet in your web browser. Occasionally another link will do the same thing, like this example. (Note to users of a printed text: the words “this example” in the pdf file are blue, and are a link to a Sage worksheet.)
