Contents

1 Analytic Geometry 13
  1.1 Lines ................................. 14
  1.2 Distance Between Two Points, Circles ................. 19
  1.3 Functions ............................. 20
  1.4 Shifts and Dilations .......................... 25

2 Instantaneous Rate of Change: The Derivative 29
  2.1 The slope of a function ...................... 29
  2.2 An example ................................ 34
  2.3 Limits ................................ 36
  2.4 The Derivative Function ........................ 46
  2.5 Adjectives For Functions ......................... 51

3 Rules for Finding Derivatives 55
  3.1 The Power Rule ................................ 55
  3.2 Linearity of the Derivative ......................... 58
  3.3 The Product Rule ................................ 60
  3.4 The Quotient Rule ................................ 62
  3.5 The Chain Rule ................................ 65

4 Transcendental Functions 71
  4.1 Trigonometric Functions .......................... 71
  4.2 The Derivative of sin \( x \) ....................... 74
  4.3 A hard limit ................................ 79
  4.4 The Derivative of \( \sin x \) continued ................. 78
  4.5 Derivatives of the Trigonometric Functions ......... 79
  4.6 Exponential and Logarithmic functions .............. 80
  4.7 Derivatives of the exponential and logarithmic functions .......... 82
  4.8 Implicit Differentiation .......................... 87
  4.9 Inverse Trigonometric Functions ..................... 92
  4.10 Limits revisited ................................ 95
  4.11 Hyperbolic Functions ............................ 100

5 Curve Sketching 105
  5.1 Maxima and Minima ............................. 105
  5.2 The first derivative test ........................... 109
  5.3 The second derivative test ......................... 110
  5.4 Concavity and inflection points ...................... 111
  5.5 Asymptotes and Other Things to Look For ............ 113

6 Applications of the Derivative 117
  6.1 Optimization .................................. 117
  6.2 Related Rates ................................ 129
  6.3 Newton’s Method ................................ 137
  6.4 Linear Approximations ........................... 141
  6.5 The Mean Value Theorem ........................... 143

7 Integration 147
  7.1 Two examples ................................ 147
  7.2 The Fundamental Theorem of Calculus .................. 151
  7.3 Some Properties of Integrals ........................ 158

8 Techniques of Integration 163
  8.1 Substitution .................................. 164
  8.2 Powers of sine and cosine ........................ 169
  8.3 Trigonometric Substitutions ........................ 171
  8.4 Integration by Parts ................................ 174
  8.5 Rational Functions ................................ 178
  8.6 Numerical Integration ............................. 182
  8.7 Additional exercises ............................... 187

9 Applications of Integration 189
  9.1 Area between curves ............................. 189
  9.2 Distance, Velocity, Acceleration ...................... 194
  9.3 Volume ................................ 197
  9.4 Average value of a function ........................ 204
  9.5 Work ................................ 207
  9.6 Center of Mass ................................ 211
  9.7 Kinetic energy, improper integrals .................... 217
  9.8 Probability ................................ 221
  9.9 Arc Length ................................ 230
  9.10 Surface Area ................................ 232

10 Polar Coordinates, Parametric Equations 239
  10.1 Polar Coordinates ............................. 239
  10.2 Slopes in polar coordinates ....................... 243
  10.3 Areas in polar coordinates ......................... 245
  10.4 Parametric Equations ............................ 249
  10.5 Calculus with Parametric Equations .................. 251
Introduction

The emphasis in this course is on problems—doing calculations and story problems. To master problem solving one needs a tremendous amount of practice doing problems. The more problems you do the better you will be at doing them, as patterns will start to emerge in both the problems and in successful approaches to them. You will learn fastest and best if you devote some time to doing problems every day. Typically the most difficult problems are story problems, since they require some effort before you can begin calculating. Here are some pointers for doing story problems:

1. Carefully read each problem twice before writing anything.
2. Assign letters to quantities that are described only in words; draw a diagram if appropriate.
3. Decide which letters are constants and which are variables. A letter stands for a constant if its value remains the same throughout the problem.
4. Using mathematical notation, write down what you know and then write down what you want to find.
5. Decide what category of problem it is (this might be obvious if the problem comes at the end of a particular chapter, but will not necessarily be so obvious if it comes on an exam covering several chapters).
6. Double check each step as you go along; don’t wait until the end to check your work.
7. Use common sense; if an answer is out of the range of practical possibilities, then check your work to see where you went wrong.

Suggestions for Using This Text

1. Read the example problems carefully, filling in any steps that are left out (ask someone for help if you can’t follow the solution to a worked example).
2. Later use the worked examples to study by covering the solutions, and seeing if you can solve the problems on your own.
3. Most exercises have answers in Appendix A; the availability of an answer is marked by “⇒” at the end of the exercise. In the pdf version of the full text, clicking on the arrow will take you to the answer. The answers should be used only as a final check on your work, not as a crutch. Keep in mind that sometimes an answer could be expressed in various ways that are algebraically equivalent, so don’t assume that your answer is wrong just because it doesn’t have exactly the same form as the answer in the back.
4. A few figures in the pdf and print versions of the book are marked with “(AP)” at the end of the caption. Clicking on this should open a related interactive applet or Sage worksheet in your web browser. Occasionally another link will do the same thing, like this example. (Note to users of a printed text: the words “this example” in the pdf file are blue, and are a link to a Sage worksheet.)
