
Single Variable Calculus

Late Transcendentals

This work is licensed under the Creative Commons Attribution-NonCommercial-ShareAlike License. To view a copy of this license, visit <http://creativecommons.org/licenses/by-nc-sa/3.0/> or send a letter to Creative Commons, 543 Howard Street, 5th Floor, San Francisco, California, 94105, USA. If you distribute this work or a derivative, include the history of the document.

This text was initially written by David Guichard. The single variable material in chapters 1–9 is a modification and expansion of notes written by Neal Koblitz at the University of Washington, who generously gave permission to use, modify, and distribute his work. New material has been added, and old material has been modified, so some portions now bear little resemblance to the original.

The book includes some exercises and examples from *Elementary Calculus: An Approach Using Infinitesimals*, by H. Jerome Keisler, available at <http://www.math.wisc.edu/~keisler/calc.html> under a Creative Commons license. In addition, the chapter on differential equations (in the multivariable version) and the section on numerical integration are largely derived from the corresponding portions of Keisler's book. Albert Schueller, Barry Balof, and Mike Wills have contributed additional material.

This copy of the text was compiled from source at 12:41 on 1/31/2019.

I will be glad to receive corrections and suggestions for improvement at guichard@whitman.edu.

*For Kathleen,
without whose encouragement
this book would not have
been written.*

Contents

1

Analytic Geometry	13
1.1 Lines	14
1.2 Distance Between Two Points; Circles	19
1.3 Functions	20
1.4 Shifts and Dilations	25

2

Instantaneous Rate of Change: The Derivative	29
2.1 The slope of a function	29
2.2 An example	34
2.3 Limits	36
2.4 The Derivative Function	46
2.5 Adjectives For Functions	51

3

Rules for Finding Derivatives 55

3.1	The Power Rule	55
3.2	Linearity of the Derivative	58
3.3	The Product Rule	60
3.4	The Quotient Rule	62
3.5	The Chain Rule	65

4

Trigonometric Functions 71

4.1	Trigonometric Functions	71
4.2	The Derivative of $\sin x$	74
4.3	A hard limit	75
4.4	The Derivative of $\sin x$, continued	78
4.5	Derivatives of the Trigonometric Functions	79
4.6	Implicit Differentiation	80
4.7	Limits revisited	84

5

Curve Sketching 89

5.1	Maxima and Minima	89
5.2	The first derivative test	93
5.3	The second derivative test	94
5.4	Concavity and inflection points	95
5.5	Asymptotes and Other Things to Look For	97

6

Applications of the Derivative 101

6.1	Optimization	101
6.2	Related Rates	113
6.3	Newton's Method	121
6.4	Linear Approximations	125
6.5	The Mean Value Theorem	127

7

Integration	131
7.1 Two examples	131
7.2 The Fundamental Theorem of Calculus	135
7.3 Some Properties of Integrals	142
7.4 Substitution	146

8

Applications of Integration	153
8.1 Area between curves	153
8.2 Distance, Velocity, Acceleration	158
8.3 Volume	161
8.4 Average value of a function	168
8.5 Work	171

9

Transcendental Functions	177
9.1 Inverse functions	177
9.2 The natural logarithm	183
9.3 The exponential function	187
9.4 Other bases	190
9.5 Inverse Trigonometric Functions	194
9.6 Hyperbolic Functions	197

10

Techniques of Integration	203
10.1 Powers of sine and cosine	203
10.2 Trigonometric Substitutions	205
10.3 Integration by Parts	208
10.4 Rational Functions	212
10.5 Numerical Integration	216
10.6 Additional exercises	221

11

More Applications of Integration 223

11.1	Center of Mass	223
11.2	Kinetic energy; improper integrals	229
11.3	Probability	233
11.4	Arc Length	242
11.5	Surface Area	244

12

Polar Coordinates, Parametric Equations 251

12.1	Polar Coordinates	251
12.2	Slopes in polar coordinates	255
12.3	Areas in polar coordinates	257
12.4	Parametric Equations	260
12.5	Calculus with Parametric Equations	263

13

Sequences and Series 267

13.1	Sequences	268
13.2	Series	274
13.3	The Integral Test	278
13.4	Alternating Series	283
13.5	Comparison Tests	285
13.6	Absolute Convergence	288
13.7	The Ratio and Root Tests	289
13.8	Power Series	292
13.9	Calculus with Power Series	295
13.10	Taylor Series	297
13.11	Taylor's Theorem	300
13.12	Additional exercises	306

Introduction

The emphasis in this course is on problems—doing calculations and story problems. To master problem solving one needs a tremendous amount of practice doing problems. The more problems you do the better you will be at doing them, as patterns will start to emerge in both the problems and in successful approaches to them. You will learn fastest and best if you devote some time to doing problems every day.

Typically the most difficult problems are story problems, since they require some effort before you can begin calculating. Here are some pointers for doing story problems:

1. Carefully read each problem twice before writing anything.
2. Assign letters to quantities that are described only in words; draw a diagram if appropriate.
3. Decide which letters are constants and which are variables. A letter stands for a constant if its value remains the same throughout the problem.
4. Using mathematical notation, write down what you know and then write down what you want to find.
5. Decide what category of problem it is (this might be obvious if the problem comes at the end of a particular chapter, but will not necessarily be so obvious if it comes on an exam covering several chapters).
6. Double check each step as you go along; don't wait until the end to check your work.
7. Use common sense; if an answer is out of the range of practical possibilities, then check your work to see where you went wrong.

12 Introduction

Suggestions for Using This Text

1. Read the example problems carefully, filling in any steps that are left out (ask someone for help if you can't follow the solution to a worked example).
2. Later use the worked examples to study by covering the solutions, and seeing if you can solve the problems on your own.
3. Most exercises have answers in Appendix A; the availability of an answer is marked by " \Rightarrow " at the end of the exercise. In the pdf version of the full text, clicking on the arrow will take you to the answer. The answers should be used only as a final check on your work, not as a crutch. Keep in mind that sometimes an answer could be expressed in various ways that are algebraically equivalent, so don't assume that your answer is wrong just because it doesn't have exactly the same form as the answer in the back.
4. A few figures in the pdf and print versions of the book are marked with "(AP)" at the end of the caption. Clicking on this should open a related interactive applet or Sage worksheet in your web browser. Occasionally another link will do the same thing, like this example. (Note to users of a printed text: the words "this example" in the pdf file are blue, and are a link to a Sage worksheet.)
