# Single and Multivariable Calculus

*Early Transcendentals*

---

This work is licensed under the Creative Commons Attribution-NonCommercial-ShareAlike License. To view a copy of this license, visit <http://creativecommons.org/licenses/by-nc-sa/3.0/> or send a letter to Creative Commons, 543 Howard Street, 5th Floor, San Francisco, California, 94105, USA. If you distribute this work or a derivative, include the history of the document.

This text was initially written by David Guichard. The single variable material in chapters 1–9 is a modification and expansion of notes written by Neal Koblitz at the University of Washington, who generously gave permission to use, modify, and distribute his work. New material has been added, and old material has been modified, so some portions now bear little resemblance to the original.

The book includes some exercises and examples from *Elementary Calculus: An Approach Using Infinitesimals*, by H. Jerome Keisler, available at <http://www.math.wisc.edu/~keisler/calc.html> under a Creative Commons license. In addition, the chapter on differential equations (in the multivariable version) and the section on numerical integration are largely derived from the corresponding portions of Keisler's book. Albert Schueller, Barry Balof, and Mike Wills have contributed additional material.

This copy of the text was compiled from source at 19:59 on 5/16/2017.

I will be glad to receive corrections and suggestions for improvement at [guichard@whitman.edu](mailto:guichard@whitman.edu).

*For Kathleen,  
without whose encouragement  
this book would not have  
been written.*

# Contents

<b>1</b>	
<b>Analytic Geometry</b>	<b>15</b>
1.1 Lines	16
1.2 Distance Between Two Points; Circles	21
1.3 Functions	22
1.4 Shifts and Dilations	27

<b>2</b>	
<b>Instantaneous Rate of Change: The Derivative</b>	<b>31</b>
2.1 The slope of a function	31
2.2 An example	36
2.3 Limits	38
2.4 The Derivative Function	48
2.5 Adjectives For Functions	53

5

Contents 7

<b>6</b>	
<b>Applications of the Derivative</b>	<b>119</b>
6.1 Optimization	119
6.2 Related Rates	131
6.3 Newton's Method	139
6.4 Linear Approximations	143
6.5 The Mean Value Theorem	145

<b>7</b>	
<b>Integration</b>	<b>149</b>
7.1 Two examples	149
7.2 The Fundamental Theorem of Calculus	153
7.3 Some Properties of Integrals	160

<b>8</b>	
<b>Techniques of Integration</b>	<b>165</b>
8.1 Substitution	166
8.2 Powers of sine and cosine	171
8.3 Trigonometric Substitutions	173
8.4 Integration by Parts	176
8.5 Rational Functions	180
8.6 Numerical Integration	184
8.7 Additional exercises	189

6 Contents

<b>3</b>	
<b>Rules for Finding Derivatives</b>	<b>57</b>
3.1 The Power Rule	57
3.2 Linearity of the Derivative	60
3.3 The Product Rule	62
3.4 The Quotient Rule	64
3.5 The Chain Rule	67

<b>4</b>	
<b>Transcendental Functions</b>	<b>73</b>
4.1 Trigonometric Functions	73
4.2 The Derivative of $\sin x$	76
4.3 A hard limit	77
4.4 The Derivative of $\sin x$ , continued	80
4.5 Derivatives of the Trigonometric Functions	81
4.6 Exponential and Logarithmic functions	82
4.7 Derivatives of the exponential and logarithmic functions	84
4.8 Implicit Differentiation	89
4.9 Inverse Trigonometric Functions	94
4.10 Limits revisited	97
4.11 Hyperbolic Functions	102

<b>5</b>	
<b>Curve Sketching</b>	<b>107</b>
5.1 Maxima and Minima	107
5.2 The first derivative test	111
5.3 The second derivative test	112
5.4 Concavity and inflection points	113
5.5 Asymptotes and Other Things to Look For	115

8 Contents

<b>9</b>	
<b>Applications of Integration</b>	<b>191</b>
9.1 Area between curves	191
9.2 Distance, Velocity, Acceleration	196
9.3 Volume	199
9.4 Average value of a function	206
9.5 Work	209
9.6 Center of Mass	213
9.7 Kinetic energy; improper integrals	219
9.8 Probability	223
9.9 Arc Length	232
9.10 Surface Area	234

<b>10</b>	
<b>Polar Coordinates, Parametric Equations</b>	<b>241</b>
10.1 Polar Coordinates	241
10.2 Slopes in polar coordinates	245
10.3 Areas in polar coordinates	247
10.4 Parametric Equations	251
10.5 Calculus with Parametric Equations	253

- 16.9 The Divergence Theorem . . . . . 450

# Introduction

The emphasis in this course is on problems—doing calculations and story problems. To master problem solving one needs a tremendous amount of practice doing problems. The more problems you do the better you will be at doing them, as patterns will start to emerge in both the problems and in successful approaches to them. You will learn fastest and best if you devote some time to doing problems every day.

Typically the most difficult problems are story problems, since they require some effort before you can begin calculating. Here are some pointers for doing story problems:

1. Carefully read each problem twice before writing anything.
2. Assign letters to quantities that are described only in words; draw a diagram if appropriate.
3. Decide which letters are constants and which are variables. A letter stands for a constant if its value remains the same throughout the problem.
4. Using mathematical notation, write down what you know and then write down what you want to find.
5. Decide what category of problem it is (this might be obvious if the problem comes at the end of a particular chapter, but will not necessarily be so obvious if it comes on an exam covering several chapters).
6. Double check each step as you go along; don't wait until the end to check your work.
7. Use common sense; if an answer is out of the range of practical possibilities, then check your work to see where you went wrong.

## Suggestions for Using This Text

1. Read the example problems carefully, filling in any steps that are left out (ask someone for help if you can't follow the solution to a worked example).
2. Later use the worked examples to study by covering the solutions, and seeing if you can solve the problems on your own.
3. Most exercises have answers in Appendix A; the availability of an answer is marked by " $\Rightarrow$ " at the end of the exercise. In the pdf version of the full text, clicking on the arrow will take you to the answer. The answers should be used only as a final check on your work, not as a crutch. Keep in mind that sometimes an answer could be expressed in various ways that are algebraically equivalent, so don't assume that your answer is wrong just because it doesn't have exactly the same form as the answer in the back.
4. A few figures in the pdf and print versions of the book are marked with "(AP)" at the end of the caption. Clicking on this should open a related interactive applet or Sage worksheet in your web browser. Occasionally another link will do the same thing, like this example. (Note to users of a printed text: the words "this example" in the pdf file are blue, and are a link to a Sage worksheet.)
