Late Transcendentals

This work is licensed under the Creative Commons Attribution-NonCommercial-ShareAlike License. To view a copy of this license, visit <http://creativecommons.org/licenses/by-nc-sa/3.0/> or send a letter to Creative Commons, 543 Howard Street, 5th Floor, San Francisco, California, 94105, USA. If you distribute this work or a derivative, include the history of the document.

This text was initially written by David Guichard. The single variable material in chapters 1–9 is a modification and expansion of notes written by Neal Koblitz at the University of Washington, who generously gave permission to use, modify, and distribute his work. New material has been added, and old material has been modified, so some portions now bear little resemblance to the original.

The book includes some exercises and examples from *Elementary Calculus: An Approach Using Infinitesimals*, by H. Jerome Keisler, available at <http://www.math.wisc.edu/~keisler/calc.html> under a Creative Commons license. In addition, the chapter on differential equations is largely derived from the corresponding chapter in Keisler's book. Albert Schueller, Barry Balof, and Mike Wills have contributed additional material.

This copy of the text was compiled from source at 8:31 on 2/3/2012.

I will be glad to receive corrections and suggestions for improvement at guichard@whitman.edu.

*For Kathleen,
without whose encouragement
this book would not have
been written.*

Contents

1		
Analytic Geometry		1
1.1	Lines	2
1.2	Distance Between Two Points; Circles	7
1.3	Functions	8
1.4	Shifts and Dilations	13
2		
Instantaneous Rate of Change: The Derivative		17
2.1	The slope of a function	17
2.2	An example	22
2.3	Limits	24
2.4	The Derivative Function	34
2.5	Adjectives For Functions	39

3		
Rules for Finding Derivatives		43
3.1	The Power Rule	43
3.2	Linearity of the Derivative	46
3.3	The Product Rule	48
3.4	The Quotient Rule	50
3.5	The Chain Rule	53
4		
Trigonometric Functions		59
4.1	Trigonometric Functions	59
4.2	The Derivative of $\sin x$	62
4.3	A hard limit	63
4.4	The Derivative of $\sin x$, continued	65
4.5	Derivatives of the Trigonometric Functions	66
4.6	Implicit Differentiation	68
4.7	Limits revisited	72
5		
Curve Sketching		77
5.1	Maxima and Minima	77
5.2	The first derivative test	81
5.3	The second derivative test	82
5.4	Concavity and inflection points	83
5.5	Asymptotes and Other Things to Look For	85
6		
Applications of the Derivative		89
6.1	Optimization	89
6.2	Related Rates	101
6.3	Newton's Method	109
6.4	Linear Approximations	113
6.5	The Mean Value Theorem	115

7

Integration	119
7.1 Two examples	119
7.2 The Fundamental Theorem of Calculus	123
7.3 Some Properties of Integrals	130
7.4 Substitution	134

8

Applications of Integration	141
8.1 Area between curves	141
8.2 Distance, Velocity, Acceleration	146
8.3 Volume	149
8.4 Average value of a function	155
8.5 Work	158

9

Transcendental Functions	163
9.1 Inverse functions	163
9.2 The natural logarithm	169
9.3 The exponential function	173
9.4 Other bases	176
9.5 Inverse Trigonometric Functions	180
9.6 Hyperbolic Functions	183

10

Techniques of Integration	189
10.1 Powers of sine and cosine	189
10.2 Trigonometric Substitutions	191
10.3 Integration by Parts	194
10.4 Rational Functions	197
10.5 Additional exercises	202

11

More Applications of Integration	203
11.1 Center of Mass	203
11.2 Kinetic energy; improper integrals	209
11.3 Probability	213
11.4 Arc Length	222
11.5 Surface Area	224

12

Polar Coordinates, Parametric Equations	229
12.1 Polar Coordinates	229
12.2 Slopes in polar coordinates	233
12.3 Areas in polar coordinates	235
12.4 Parametric Equations	238
12.5 Calculus with Parametric Equations	241

13

Sequences and Series	245
13.1 Sequences	246
13.2 Series	252
13.3 The Integral Test	256
13.4 Alternating Series	261
13.5 Comparison Tests	263
13.6 Absolute Convergence	266
13.7 The Ratio and Root Tests	267
13.8 Power Series	270
13.9 Calculus with Power Series	273
13.10 Taylor Series	274
13.11 Taylor's Theorem	278
13.12 Additional exercises	284

14

Three Dimensions	287
14.1 The Coordinate System	287
14.2 Vectors	290
14.3 The Dot Product	295
14.4 The Cross Product	301
14.5 Lines and Planes	305
14.6 Other Coordinate Systems	311

15

Vector Functions	317
15.1 Space Curves	317
15.2 Calculus with vector functions	319
15.3 Arc length	327
15.4 Motion along a curve	333

16

Partial Differentiation	335
16.1 Functions of Several Variables	335
16.2 Limits and Continuity	339
16.3 Partial Differentiation	343
16.4 The Chain Rule	349
16.5 Directional Derivatives	352
16.6 Higher order derivatives	356
16.7 Maxima and minima	358
16.8 Lagrange Multipliers	363

17

Multiple Integration	369
17.1 Volume and Average Height	369
17.2 Double Integrals in Cylindrical Coordinates	379
17.3 Moment and Center of Mass	383
17.4 Surface Area	385
17.5 Triple Integrals	387
17.6 Cylindrical and Spherical Coordinates	390
17.7 Change of Variables	394

18

Vector Calculus	401
18.1 Vector Fields	401
18.2 Line Integrals	403
18.3 The Fundamental Theorem of Line Integrals	407
18.4 Green's Theorem	410
18.5 Divergence and Curl	415
18.6 Vector Equations of Surfaces	418
18.7 Surface Integrals	424
18.8 Stokes's Theorem	428
18.9 The Divergence Theorem	432

19

Differential Equations	437
19.1 First Order Differential Equations	438
19.2 First Order Homogeneous Linear Equations	442
19.3 First Order Linear Equations	445
19.4 Approximation	447
19.5 Second Order Homogeneous Equations	450
19.6 Second Order Linear Equations	453
19.7 Second Order Linear Equations, take two	458

Introduction

The emphasis in this course is on problems—doing calculations and story problems. To master problem solving one needs a tremendous amount of practice doing problems. The more problems you do the better you will be at doing them, as patterns will start to emerge in both the problems and in successful approaches to them. You will learn fastest and best if you devote some time to doing problems every day.

Typically the most difficult problems are story problems, since they require some effort before you can begin calculating. Here are some pointers for doing story problems:

1. Carefully read each problem twice before writing anything.
2. Assign letters to quantities that are described only in words; draw a diagram if appropriate.
3. Decide which letters are constants and which are variables. A letter stands for a constant if its value remains the same throughout the problem.
4. Using mathematical notation, write down what you know and then write down what you want to find.
5. Decide what category of problem it is (this might be obvious if the problem comes at the end of a particular chapter, but will not necessarily be so obvious if it comes on an exam covering several chapters).
6. Double check each step as you go along; don't wait until the end to check your work.
7. Use common sense; if an answer is out of the range of practical possibilities, then check your work to see where you went wrong.

Suggestions for Using This Text

1. Read the example problems carefully, filling in any steps that are left out (ask someone for help if you can't follow the solution to a worked example).
2. Later use the worked examples to study by covering the solutions, and seeing if you can solve the problems on your own.
3. Most exercises have answers in Appendix A; the availability of an answer is marked by “ \Rightarrow ” at the end of the exercise. In the pdf version of the full text, clicking on the arrow will take you to the answer. The answers should be used only as a final check on your work, not as a crutch. Keep in mind that sometimes an answer could be expressed in various ways that are algebraically equivalent, so don't assume that your answer is wrong just because it doesn't have exactly the same form as the answer in the back.
4. A few figures in the book are marked with “(JA)” at the end of the caption. Clicking on this should open a related Java applet or Sage worksheet in your web browser. Occasionally another link will do the same thing, like this example. (Note to users of a printed text: the words “this example” in the pdf file are blue, and are a link to a Sage worksheet.)
